

Post-infectious illness: **How Psychoneuroimmunology Impacts Disease Sequelae**

PRESENTED BY:
Paul Kern

OVERVIEW

Join our insightful naturopath Paul Kern for a new look at common post-infectious illnesses. This educational event has been created to assist naturopaths and nutritionists in addressing these common, yet often complex conditions in their clinical practice. With the global acknowledgement of Post-COVID syndrome (long COVID), there has been a greater recognition of other long-term health conditions following infections. Patients often experience these conditions for many years before diagnosis and treatment seeking. By the time they arrive in your clinic they are often exhausted, both physically from their condition, and mentally from the battle to be heard and understood by the healthcare profession. Practitioners have a profound influence to assist these patients with better understanding of the conditions preceding the illness and the contribution of the psyche, immune function, neural functionality and the gut microbiome.

WHY ATTEND?

- Gain a deeper understanding of how post-infectious illness occur and to who they might occur
- Develop a framework for navigating the psychoneuroimmunological dysfunction at play
- Gain practical tools for navigating these complex and often emotionally demanding cases

PRICE:
